Check

Note: We can help you determine if a smart contract may be a scam, but there is no 100% guarantee and we are trying to do our best to detect all scams. The contract check is only used as a reference for users, not as a basis for contract judgment.

Contract Security

Contract source code verified

This token contract is open source. You can check the contract code for details. Unsourced token contracts are likely to have malicious functions to defraud their users of their assets.

No proxy

There is no proxy in the contract. The proxy contract means contract owner can modify the function of the token and possibly effect the price.

No mint function

Mint function is transparent or non-existent. Hidden mint functions may increase the amount of tokens in circulation and effect the price of the token.

No function found that retrieves ownership

If this function exists, it is possible for the project owner to regain ownership even after relinquishing it

Owner can't change balance

The contract owner is not found to have the authority to modify the balance of tokens at other addresses.

No hidden owner

No hidden owner address was found for the token. For contract with a hidden owner, developer can still manipulate the contract even if the ownership has been abandoned.

This token can not self destruct

No self-destruct function found. If this function exists and is triggered, the contract will be destroyed, all functions will be unavailable, and all related assets will be erased.

No external call risk found

External calls would cause this token contract to be highly dependent on other contracts, which may be a potential risk.

This token is not a gas abuser

No gas abuse activity has been found.

Honeypot Risk

Buy Tax: **unknown** Sell Tax: **unknown**

This does not appear to be a honeypot.

We are not aware of any malicious code.

No codes found to suspend trading.

If a suspendable code is included, the token maybe neither be bought nor sold (honeypot risk).

The token can be bought

Generally, these unbuyable tokens would be found in Reward Tokens. Such Tokens are issued as rewards for some on-chain applications and cannot be bought directly by users.

Trading cooldown function

The token contract has the trading cooldown function. Within a certain time or block after buying, the user will not be able to sell the token.

Anti_whale(Limited number of transactions)

The number of token transactions is limited. The number of scam token transactions may be limited (honeypot risk).

Anti whale can not be modified

The maximum trading amount or maximum position can not be modified.

Tax can be modified

The contract owner may contain the authority to modify the transaction tax. If the transaction tax is increased to more than 49%, the tokens will not be able to be traded (honeypot risk).

Blacklist function

The blacklist function is included. Some addresses may not be able to trade normally (honeypot risk).

No whitelist

The whitelist function is not included. If there is a whitelist, some addresses may not be able to trade normally (honeypot risk).

No tax changes found for personal addresses

No tax changes were found for every assigned address. If it exists, the contract owner may set a very outrageous tax rate for assigned address to block it from trading.
